- Leg Pain/Swelling
- Non-Healing Wounds
- Liver Cancer
- Uterine Fibroids
- Painful Spine Fractures
- Deep Vein Thrombosis
- Varicocele
- Pelvic Congestion Syndrome
- Venous Access

# Colorado's Most Trusted Endovascular Specialists

# A Safer Alternative

Since we are not affiliated with a hospital or located on a hospital campus, we are a low-exposure facility.

We have a dedicated entrance for patients that's not shared with anyone else, none of our staff work at a hospital, and we screen every person who comes into our clinic.

You can rest easy knowing that we will continue to provide essential treatments during these uncertain times.

ECCO MEDICAL
ENDOVASCULAR CONSULTANTS OF COLORADO

## Aaron Kovaleski, MD

Board Certified in Vascular and Interventional Radiology
Board Certified in Diagnostic Radiology

Dr. Aaron Kovaleski is a board-certified, fellowship-trained Vascular and Interventional Radiologist and leader in his field. He has performed thousands of endovascular interventions and specializes in therapies for Peripheral Artery Disease (PAD), uterine fibroids, benign prostate enlargement, liver cancer, spinal compression fractures, among other things. The majority of his practice consists of lower extremity revascularization to prevent limb amputation; uterine fibroid embolization to help women with severe pain and bleeding; prostate artery embolization to provide men with a lower risk, non-surgical option for the ever-present benign prostatic hyperplasia (BPH). Dr. Kovaleski works closely with several rural hospitals to provide interventional services to underserved populations and critical access areas. He is also certified in wound care and Hyperbaric Oxygen Therapy and works closely with multiple wound care centers in the state. He continues to do research and contribute to evidence-based medicine, with his most recent publication occurring in 2023 in the field of PAD intervention.

## What is Interventional Radiology?

Most of us are familiar with diagnostic radiology – using X-rays, ultrasound, CT and MRI scans to diagnose diseases and conditions. Interventional radiology goes beyond simply identifying the problem, it involves treatment. Our highly trained interventional radiologists deliver precise and targeted **minimally invasive, image-guided** treatments to complex and serious diseases and conditions.

## What Makes ECCO Right for You?

Drs. Kovaleski and the ECCO team are leaders in their field and have been for many years. They designed their facility to provide compassionate, expert care that their patients deserve.

## The Concierge Approach to Endovascular Care

We are endovascular experts who provide a variety of minimally invasive image-guided procedures designed to get you back on the road to good health.

Our office-based lab, fully equipped with the latest technology and a caring staff focused on your every need, is a real benefit to our patients because this setting means lower infection and complication rates, shorter wait times for patients – no hospital- related delays – and the highest level of personalized care.
